

Rural Local & Tribal Road Safety Toolkit & User Guides Webinar Series

The Focus:

Local and Tribal Road Safety

The Reason:

Getting the most from the Toolkit and User Guides to address safety on rural local and tribal roadways where fatal crash risk is 2.4 times higher than urban roadways

Webinars will provide an overview of the safety toolkit and user guides along with presentations from practitioners who have used the toolkit and identified tools.

The Federal Highway Administration's (FHWA) **Toolkit for Rural, Local, and Tribal Road Safety** provides a step-by-step safety analysis process along with the tools, examples and resources. The accompanying **User Guides** give real world examples through two hypothetical typical scenarios.

Gone are the days of searching multiple websites or documents for information on rural road safety to make a meaningful impact on safety. The **Toolkit** and **User Guides** bring together the components of an effective safety process with the tools and resources and makes it possible to address safety conditions through this resource.

Target Audience: Whether you are a local or tribal practitioner with responsibility for roads in your community, a federal or state engineer or planner or someone with basic technical background but no formal traffic safety training – this webinar is for you.

Rural Local and Tribal Road Safety Webinar Series

February 9, 2016
